

Lab 2. Approvals (Part 1) - Travel Approval

Author: Serge Luca aka "Doctor Flow."

Learning objectives: Approvals and conditions.

Duration: 20 minutes.

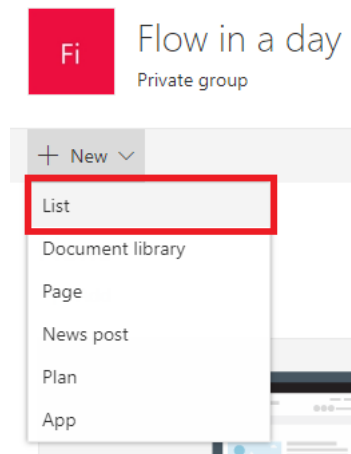

Scenario: A user stores travel information in a SharePoint list named **Travels**. When a new travel request is created, a flow is triggered and asks a manager to Approve/Reject.

Prerequisites: Each student must have a dedicated custom SharePoint list named **Travels_<name>**. The list must have three fields: **Title**, **Amount** (currency), and **Status** (single line of text). The student will create this list in the first task of this lab.

Remarks: the first time approval is created in an environment, the system provisions the infrastructure (approval system tables are made in the internal database, which is Dataverse) needed for the approvals. Therefore, the first approval may take some time to appear.

Task 2.1: Create a SharePoint list

1. Create your own custom SharePoint list using the following steps:
 - a. Go to your SharePoint site. The site URL is: <tenant URL>sites/Flowinaday.
 - b. Click **New > List**:

- c. In the **Name** text box type something similar to, **Travels_<YourFirstnameYourLastname>**. Ensure the list name is unique.

- d. Click **Create**.

Create list

Name *

Travels_AyrtonSenna

Cancel

2. Add two columns, **Amount**, and **Status** using the following steps:

- a. Click **Add column** > **Currency**.

Travels_AyrtonSenna

Title ▾

+ Add column

- b. Provide the following information, and then click **Save**.

3. Add a **Single line of text** column named **Status**.

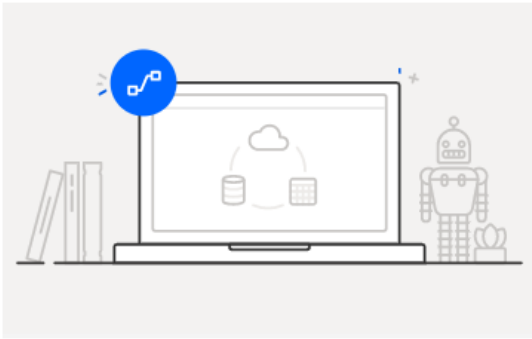

Task 2.2: Create an approval flow

1. Create a new Automated flow triggered when an item is created in a SharePoint list, using the following steps:
 - a. **New flow> Automated cloud flow.**

- b. In the **Flow name** text box, type **Expense Approval** and select the SharePoint trigger **When an item is created**.

Build an automated cloud flow

Free yourself from repetitive work just by connecting the apps you already use—automate alerts, reports, and other tasks.

Examples:

- Automatically collect and store data in business solutions
- Generate reports via custom queries on your SQL database

2. Add an approvals action
- a. **New step > Start and wait for an approval.**
Hint: search for approval.

- b. **Approval type** > **Approve/Reject -First to respond**
- c. **Title** > type **Please approve the following expense**
- d. **Assigned to** > type the e-mail address (the one provided by the trainer in the training tenant)
- e. **Details** > type the text as per the following screenshot:

Start and wait for an approval ...

* Approval type: **Approve/Reject - First to respond**

* Title: Please approve the following expenses

* Assigned to: [Redacted]

Details: **Destination: Amount: has been submitted by**

Item link: Add a link to the item to approve

Item link description: Describe the link to the item

Show advanced options ▾

- f. To define the destination, place the cursor to the right of **Destination;** in the action panel, click the **Add a dynamic value** button.
- g. Scroll down to dialog and select **Title** from the trigger **When an item is created**:

Start and wait for an approval ...

* Approval type: Approve/Reject - First to respond

* Title: Please approve the following expenses

* Assigned to: [Redacted];

Details: Destination; Amount: has been submitted by:

3. Add a condition action using the following steps:
 - a. After the **Start and wait for approval** action, select **New step** > **Condition control**

A condition is added to the flow containing three boxes, **Choose a value**, **is equal to** and **Choose a value**.

- b. In the left **Choose a value** text box, use the Dynamic content tab to select **Outcome** from the approval action:

- c. In the right **Choose a value** text box, type **Approve:** (don't type Approved)

Condition

Outcome × is equal to Approve

Add dynamic content +

+ Add ▾

4. Add a SharePoint Update item action to the *If yes* branch of the condition using the following steps:
 - a. In the **if yes** branch, click **Add an action**, and select the SharePoint **Update item** action:

Start and wait for an approval

Condition

Outcome × is equal to Approve

+ Add ▾

✓ If yes

✗ If no

Update item

* Site Address

* List Name Travels

* Id Unique identifier of item to be updated
'Id' is required.

* Title
'Title' is required.

Settings

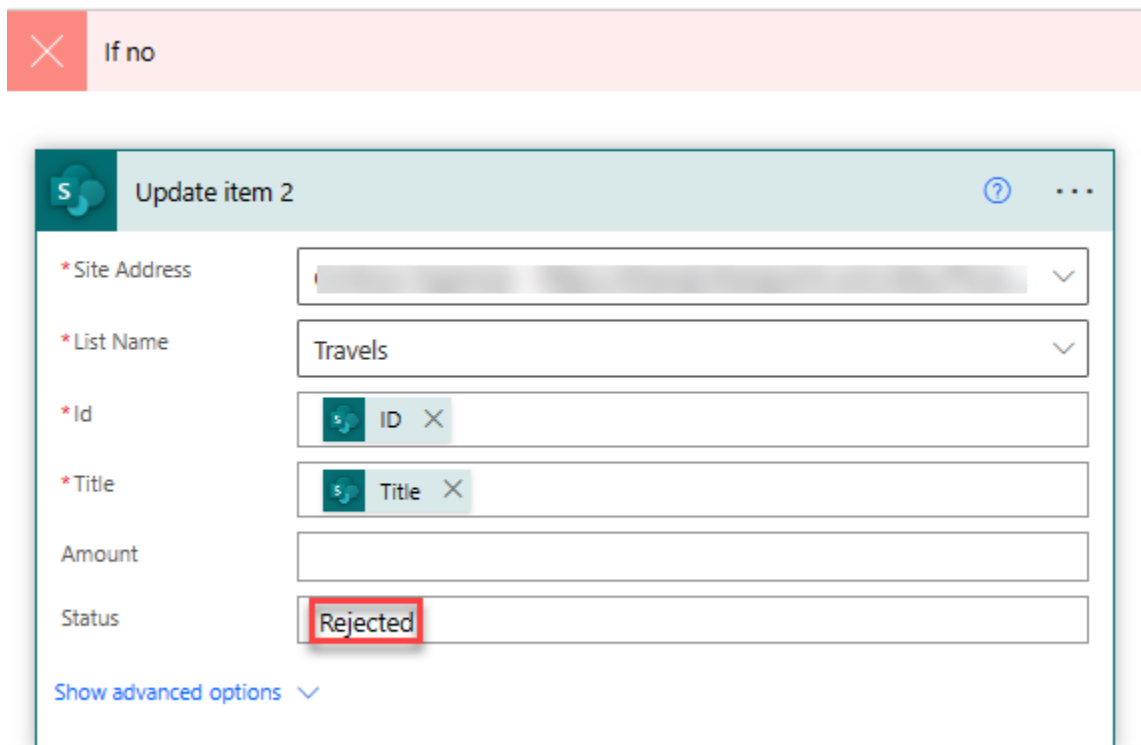

Configure run after

- b. In the **If no** branch, click **Add an action**.

- c. Click the **My clipboard** tab, and select **Update item**.

- d. Change **Status** to **Rejected**:

Rename the condition and the two update item actions as shown in the following screenshot: It is recommended to keep the default action name and to append additional details; if the original action name is **Update item**, then rename it "**Update item – set status to approved**" or "**Update item – set status to rejected**":

e.

✓ If yes	✗ If no
<div>Update item - set status to Approved</div> <div>* Site Address: Contoso Expenses - https://shareql.sharepoint.com/sites/Flows... * List Name: Travels</div>	<div>Update item - set status to Rejected</div> <div>* Site Address: Contoso Expenses - https://shareql.sharepoint.com/sites/Flows... * List Name: Travels</div>

6. Send an e-mail if the expense is approved or rejected by using the following steps:
- In the **If Yes** branch, **Add an action** > **Send an e-mail (V2)** action (Office 365 Outlook).
 - Complete like the following screenshot (include the Title field from the trigger)

Update item - set status to Approved

Send an email (V2) 2

* To: SL

* Subject: Expense Approved

* Body:

Font 14 B I U

Your expense Title has been approved by

Show advanced options

Rename the action name.

- c. Place the cursor to the right of **approved by**; in the dialog pane, click the **Add an expression** button,

Send an email (V2)

To*
Created By Email X

Subject*
Expense Approved

Body*
Font 12 B I U [icons] [fx]
Your expense [dynamic value: Title] X has been approved by [dynamic value:]

Show advanced options

- d. You will now add the name of the approver, and you will have to rely on code (expression) that we will fully explain in a subsequent lab; 1° move the cursor next to approved by, 2 °click **Expression**, 3° **Dynamic values** , 4° select **Responses** (click see more if you don't see Responses) . This will generate an expression as illustrated here:

Condition
Outcome X is equal to
+ Add

If yes

Update item - set status to Approved

Send an email (V2)

* To: sergeluca@ShareQL.com X

* Subject: Expense Approved

* Body: Font 14 B I U [icons] [fx]
Your expense [dynamic value: Title] X has been approved by [dynamic value:]

Show advanced options

Dynamic Value Expression **2** Format data by examples fx

outputs("Start_and_wait_for_an_approval")["body/responses"]

Save Cancel

Formulas **Dynamic values** **3**

Search dynamic value

- body
- Responses responder
- Responses Item
- Responses **4**
All of the responses
- When an item is created
- Title

Show advanced options

But you still need to add some code to this expression:

Dynamic Value Expression [Format data by examples](#) *fx* 😊

```
outputs('Start_and_wait_for_an_approval')?['body/responses']  
['responder']['displayname']
```

...and click **Save**:

Dynamic Value Expression [Format data by examples](#) *fx* 😊

```
outputs('Start_and_wait_for_an_approval')?['body/responses']  
['responder']['displayname']
```

Save Cancel

Your **Send an e-mail** action should look like the following screenshot.

 Send an email (V2) ? ...

*To  sergeluca@ShareQL.com X

*Subject Expense Approved

*Body

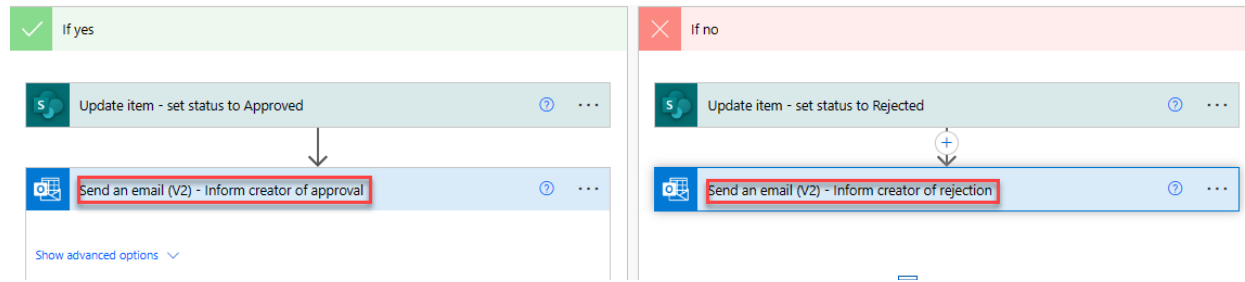

Font ▾ 14 ▾ **B** *I* U        

Your expense  Title X has been approved by  outputs(...) X

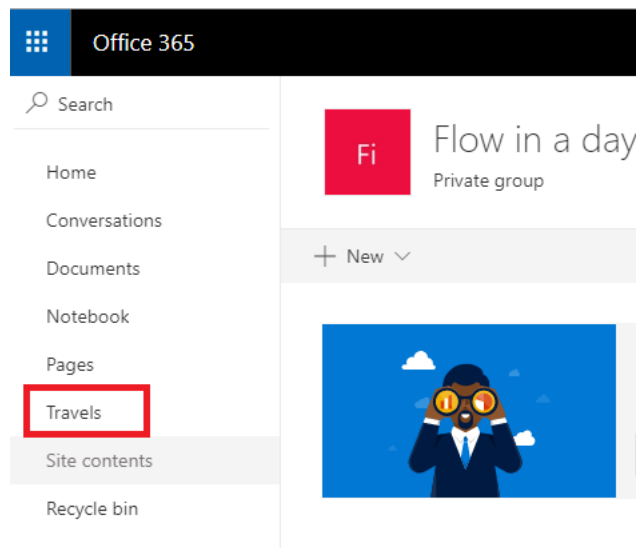

[Show advanced options](#) ▾

- e. Update the "Send an e-mail action in the other branch with this expression.

- f. Rename the **Send an e-mail** actions in both branches as illustrated here:

7. Save the flow.
8. Test the flow by adding an expense item to the SharePoint list using the following steps:
- a. Navigate to your SharePoint list, for example, by clicking on the list name on the Quick Launch bar.

- b. Click **New**:

- c. Complete the form similar to the following screenshot (keep the **Status** field empty):

 Save  Cancel  Copy link

New item

Title *
Tokyo

Amount
800

Status
Enter value here

Attachments
[Add attachments](#)

Save Cancel

- d. Save the new record, which will automatically trigger the flow.
e. Check the flow status. It should be **running**:

- iii. Select **Approve**, and then click **Confirm**.

The flow will send you a notification by e-mail:

Task 2.3: Extending the flow by adding a new status when the flow is waiting

1. Click **Edit** on your flow's details page.
2. Add a SharePoint **Update item** action between the trigger and the condition, and complete it as shown in the following screenshot.

A screenshot of the "Update item" action configuration in a flow. The action is preceded by a trigger "When an item is created". The configuration fields are: "Site Address" (a dropdown menu), "List Name" (a dropdown menu with "Travels" selected), "Id" (a text box containing a SharePoint ID with a dynamic value icon and a close button), "Title" (a text box containing a dynamic value icon and a close button), "Amount" (an empty text box), and "Status" (a dropdown menu with "Being approved" selected and highlighted by a red rectangle). At the bottom, there is a link "Show advanced options" with a downward arrow.

Hint:

- The **ID** Dynamic value comes from the trigger and identifies the corresponding SharePoint list item.

- **Title** also comes from the trigger,
- Type the value **Being approved** in the **Status** field:

Update item

Site Address*

List Name*

Travels

Id*

1

Insert a dynamic value

Dynamic Value

Search content from previous steps

When an item is created

ID

2

3. Apply the same logic to display Approved or Rejected in the SharePoint list
4. Add a new travel expense item to the SharePoint list and check the value in its status column (it might take a few seconds before the flow starts):

Fi Flow in a day
Private group

+ New Quick edit Export to Excel Flow PowerApps ...

Travels

Title	Amount	Status
Las vegas	\$900.00	
Brussels	\$750.00	Being approved

2. Approve, and once the approval is completed, check the status value in the list.

Flow in a day

Private group

+ New Quick edit Export to Excel Flow ▾ PowerApps ▾ ...

Travels

Title ▾	Amount ▾	Status ▾
Las vegas	\$900.00	
Brussels	\$750.00	Approved

Optional exercise if time permits:

Amend the flow to automatically approve the expense If the amount is smaller than \$500; otherwise, the expense item will progress through the approval process.
